Operating principle

An automatic push-button flush is connected directly to the domestic water supply thereby eliminating the need for a cistern. Space-saving Sanicompact is ideal for installing additional cloakroom facilities almost anywhere. It accepts waste from a toilet and washbasin pumping it away through 32mm pipework, up to 3 metres vertically, 30 metres horizontally or a lesser combination of both.

Appliance: WC and Washbasin

The macerator toilet consists of several components:

- A toilet pump, with integrated cutter system housed inside the ceramic pan, dilacerating waste matter to a size of 15 mm or less, powered by a 550W motor reaching up to a maximum discharge head of 6 metres (Q=0 l/min)
- A dual flush system, ECO water saving 1.8L half flush and 3L full flush.
- A non-return valve

The toilet has 1 inlet and 1 discharge connection:

- Inlet connection : 1 washbasin connection DN 40
- Discharge : 1 DN 32

Index of protection: IP44

N.B. Sanicompact requires a minimum of 1.7 bar water supply pressure.

Technical features:

- Electrical power supply : 220-240 V / 50 Hz
